Preventative Maintenance Parts Program

Keep your Equipment in Peak Condition

THE McCORMACK DISTRIBUTING PREVENTATIVE MAINTENANCE PARTS PROGRAM

What is the Program?

The preventative maintenance schedule on Taylor soft serve and shake machines recommends that wear items such as seals and O-rings be replaced every three months. These components come in a convenient Taylor Tune-Up Kit which can be scheduled to automatically ship to your location every three months. Additionally, parts such as scraper blades, Taylor lube, Stera-Sheen, and cleaning brush kits can also be sent at an additional charge. All shipments are sent via UPS from our McCormack warehouse. Consolidating shipments saves on freight.

What are the Program Benefits?

By automatically replacing these wear items on a regular basis you can serve a consistently superior product and avoid costly and unnecessary service calls. For example, worn out or damaged rubber seals can cause damage to the beater motor, compressor, and other expensive electrical components. Regular change out of wear items protects your "A" rating and enhances the overall sanitation of your Taylor Equipment.

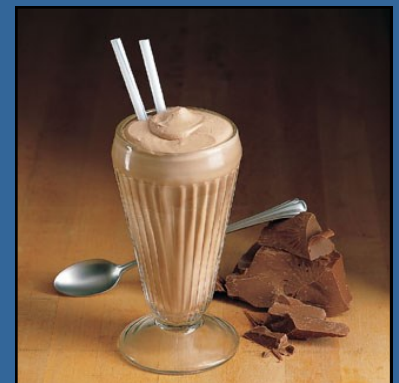

What does a Typical Program Consist Of?

A suggested program for a Taylor model 713 or 794 would entail a Tune-Up Kit (O-rings, and seals) and set of scraper blades every three months or four times a year (Kits vary by equipment). You can customize your program to have any single shipment also include brush kits and operating supplies like sanitizer and Taylor lube.

How do I Enroll?

It's easy! Just call our Parts Department and ask to enroll in the Preventative Maintenance Parts Program or fill out the form to the right and fax or mail it to our Parts Department. We'll contact you and put you in the program that best suits your needs.

**With Preventative Maintenance
you Serve Superior Product Every Time**
